ABSTRACT OF THE DISCLOSURE

[0026]   Methods, systems, and products are disclosed for verifying the integrity of web server content.   One method receives results from a client-resident integrity program operating on a client computer.   The client-resident integrity program verifies integrity of a web resource communicated from a web server to the client computer.   The method also receives results from a server-resident integrity program operating on the web server.   The results are then merged and presented at a computer system.
